

A leader doesn't follow steps
... he marks the way

WHAT IS AN IMPACTOR?

A crash cushion with our Triple Container Impact Absorber (TCIA) technology which is an enhanced cushioning impact modular system. It's more effective because it doesn't rebound on vehicles. It's categorized as a suitable product according to regulation.

When it's filled with water it can resist minor impacts and when it's filled with sand it can absorb bigger, stronger, and frontal impacts (those called mortal).

It's recommended as an impact attenuator in avenues and highways especially in crossroads, junctions, detours and merges.

Features

- Great flexibility that resists bigger impacts and collisions.
- All weather resistant: heat, snow, floods, extreme temperature changes between -22 F and 176 °F and UV ray protected.
- A filling cap, a drain outlet and the option to fill it with water or sand.
- It's totally harmless because it has no metallic parts and no sharp edges.
- Solid one-piece structure.
- Colors: yellow and orange (other colors upon request).
- Two reflective arrows (Engineer Grade) for a better visibility at night or in low-light areas.
- Easy installation, fast and economic.
- You can install any number of modules according to your requirements because it absorbs bigger impacts (those called mortal impacts).
