

IMPACT ATTENUATOR 890

Code: I-890

WHAT'S AN IMPACT ATTENUATOR?

The impact attenuator or crash cushion is a cushioning and modular system that doesn't deviate neither create a rebound effect on the vehicle, due it is transferable.

Filling with water is perfect to cushion slight impacts and filling with sand is suitable to cushion greater front impacts.

Ideal to place in deviations, forks, exits and entrances of high speed tracks or underpasses, et al.

FEATURES

- Great flexibility to withstand strong impacts and collisions.
- Resistance to environment, protection against UV rays and extreme temperature changes of -22 and 176 °F.
- Filling and draining cap to ballast water or sand.
- No metal parts and cutting edges.
- Solid structure manufactured in one piece of polyethylene; available in yellow and orange color for better visibility during day (other colors upon request).
- 2 reflective arrows on the front part for increased visibility during night and low light conditions.
- Easy, quick and affordable installation.
- Its modular design is suitable to place the number of required pieces.
