

ABSORB 190 CRASH CUSHION BARREL

Code: ABS-190

WHAT'S A CRASH CUSHION BARREL?

Barrel with attenuation system that improves the quality of impact absorption.

Its modular system doesn't deviate or produce a rebound effect on the vehicle, due to its transferability.

This road safety device is filled with water, absorbing the front slight impacts.

Ideal as impact attenuator in streets, avenues and highways; mainly suggested in forks, deviations, junctions, etc.

FEATURES

- Excellent protection to place in dangerous points of medium speed tracks or to be used as warning signs in open drains.
- With **"Impact Attenuator by Triple Container Module System"** that is used as an attenuator element and to ballast water.
- Each module is integrated by an outer container, with a second and third flexible container on its interior.
- Integrated security and filling valve (3.9 in of inner diameter) with air tight seal cap that avoid loss of water through evaporation.
- Great protection to a low cost.
- It has reflective strips to warn and increase visibility.
- Transferable impact attenuator.
- In compliance with NOM-008-SCT2-2013.
- Colors: Yellow or blue.
