

MULTI-IMPACT ATTENUATOR 7

Code: MI-7

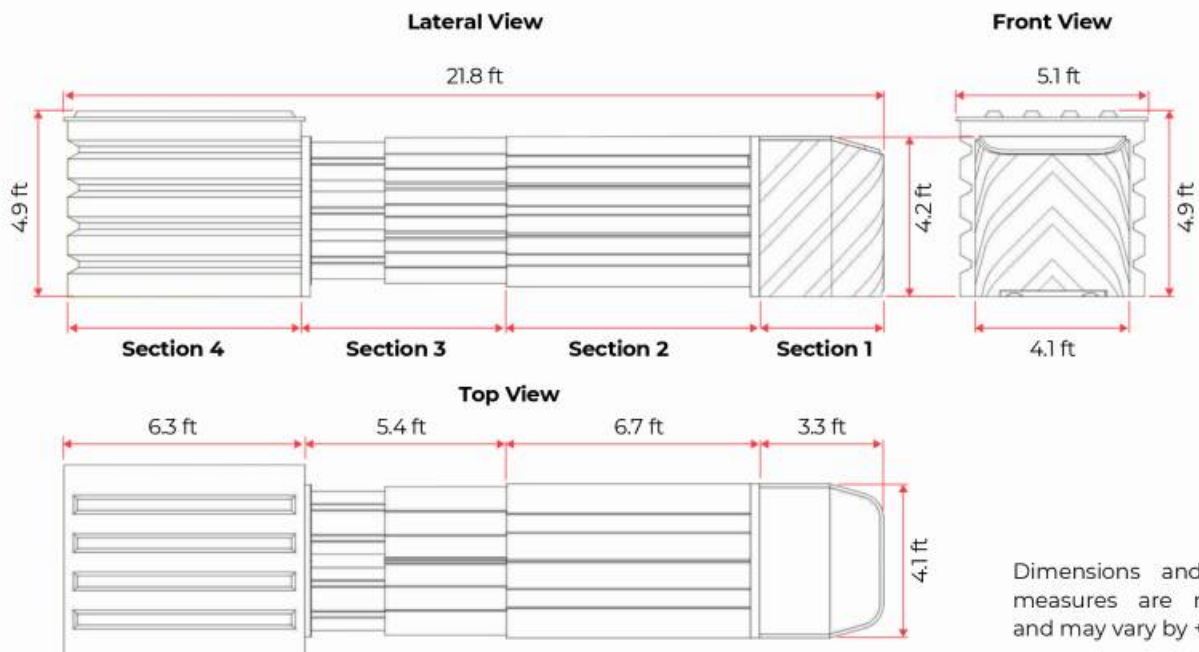

Impact Attenuator that redirects energy instead of transfer it, according with NOM 008-SCT2-2013

The Multi-Impact Attenuator 7 or crash cushion marks a new safety era for highways and high specification roads thanks to its innovative cushioning system.

FEATURES

- **Multi-Impact Attenuator 7** is integrated by 4 sections:
 1. Flexible cushioning with closed cell foam (Vitemflex plates), to absorb at the moment of an impact.
 2. Retractable scissor system that mechanically absorbs part of the impact strength.
 3. Integrated by 6 airbags designed to pneumatically absorb the remaining strength of the impact.
 4. Polyethylene container that acts as a final ballast for all the device (can be filled with sand to a capacity of approx. 6,613.8 lbs.).
- Designed to withstand a great number of impacts without deformation, in other words, recovers its original shape after an impact.
- No metal elements as rails, profiles, plates, supports and others which can cause a greater damage.
- Its dimensions and great size are a safety guarantee thanks to the 1st section which surround most of the vehicle at the moment of an impact, transforming it into the perfect lifesaver.

Dimensions and other measures are nominal and may vary by + / - 2%.
