

CRASH CUSHION WITH ROLL DEFENDER

Code: MI-RD

WHAT'S A **ROLL DEFENDER BARRIER?**

This groundbreaking system also called roll defender, is a guardrail with rollers that prevent vehicles from fatal accidents, it is used in low speed tracks, highways and high specification roads.

Single Roll Defender for low speed tracks

Double Roll Defender for high speed tracks

Triple Roll Defender for heavy duty vehicles

FEATURES

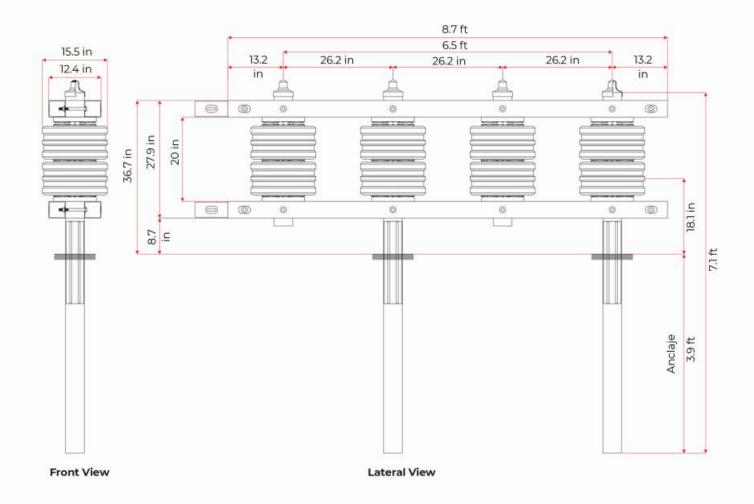

- · Rolling barrier system that absorbs the impact strength of vehicles through rollers that redirect vehicle into the road, reducing the mortality rate and injury severity on highways, high and low speed tracks.
- · Avant-garde engineering and design.
- · Great resistance to environment and extreme temperature changes.
- · High intensity reflective strips.
- · With new generation crash cushion on the front end of the Roll Defender (optional).
- · Flexible cushioning (Vitemflex plates).
- · Steel guardrail mounted on 5 polyurethane shock absorbing rollers. The Test Level depends on the level of security required in each point, the Roll Defender can be conformed by single, double or triple rollers.

MEASUREMENTS

Dimensions and other measures are nominal and may vary by +/-2%.

Manufactured in	 4" x 4" PTR Schedule 30 -pipes with a 4.5" diameter
Metal coating	Hot dip galvanized steel
Rims	• L.P.D. Flex
Rollers	L.D.P. FlexØ 15.5 in, 8.6 in height
Brakes	 2 per axle, upper and lower brake
Post cap material	L.D.P. FlexØ. 4.7 in. 3.6 in height

High intensity
Polymer concrete and 3/8" rods
• 5/8" galvanized bolts
Sections of 8.7 ft
Sections of 19.6 ft
Vitemflex cushioning
