

DELINEATOR POST

Code: R-1530

FEATURES

- Perfect to create temporary circuits and guide traffic to safe areas.
- Safe device for pedestrian; withstands shocks and impacts, recovering its shape.
- Manufactured in linear polyethylene.
- Great resistance to environment and extreme temperature changes.
- With UV-protection.
- Delineator post in orange color with white reflective rings for greater visibility.
- Hexagonal base in black color, providing stability and resistance against wind.
- Three reflective rings with high quality reflection to increase visibility at night.
- 1 extra reflective sheeting on the top part for better reflection and option to tie caution tape or chain.

WHAT'S A DELINEATOR POST?

Delineator post for traffic with reflective rings and base to avoid tipping.

Used to indicate a risk situation and delimit specific areas.

The main function of this item is prevent vehicles from invade prohibited zones, demarcate reserved areas; working as a safety road delineator in places like bike lanes, parking lot entrances or even to create pedestrian crossings.

Useful in highways, avenues, roads, routes, circuits and restricted zones, such as construction areas or road signaling.

The best of everything is that it doesn't require maintenance, this can be flexible or fixed; with an empty base or filling with sand.
