

MODULAR LAMP

Code: LM-11

WHAT'S A SOLAR LAMP?

More than road signage, an innovation that comply with high security standards in construction and road work environments.

It offers visibility, durability and versatility, this tool positions as an essential device to ensure protection of workers and safe transit flow in risk zones.

FEATURES

- Equipped with 7 ultrabright amber color LED lights that work in a flashing sequence, providing an excellent visibility at long distances, suitable to alert effectively to motorists and pedestrians about possible dangers in the road.
- Available in two versions: one with base, ideal to set on floor or over traffic signs to sign work areas in highways; and other with grip, designed to be portable or set in traffic cones, offering versatile use.
- It works with interchangeable batteries, guaranteeing a constant and reliable energy source without need of connection to external sources.
- Manufactured in MDPE with acrylic mica, which provides durability and resistance to adverse conditions, ensuring an adequate performance in all type of environments.
